

SEPTEMBER 2007 Sacco Eye Group Selected as Investigational Site for Bausch and Lomb

The Sacco Eye Group was recently selected as an investigational site for Bausch and Lomb, one of the world's leading eye care technology and contact lens companies. The selection follows a rigorous inspection, qualification and application process. Dr. Sacco is listed as Principal Investigator for current and upcoming trials into new contact lens materials and solutions. The practice has a long history of research and product development, as do both doctors. Research projects in the practice began initially with Dr. DeVita in the 1980's, then moved into the 1990's with work for Vistakon/Johnson & Johnson, Bayer and Regional Clinical Research. Prior to that Dr. Sacco did clinical work for the Ocular Hypertension Treatment Trial and Storz Pharmaceuticals. Dr. DiMattina has done research for SUNY Geneseo involving inciting factors in heart disease and cancer. Active as well in ocular research while at the SUNY College of Optometry, Dr. DiMattina co-authored a paper in the prestigious eye care science journal, *Endothelium*.
