Dr. Sacco to Present Scientific Paper at the Global Lens Symposium in Las Vegas, Nevada

In January, 2011, Dr. Sacco will be presenting a paper titled "Silicone Hydrogel Contact Lenses, Lens Care and Sterile Infiltrates: Is There a Connection?". Dr. Sacco's scientific assumption is that there are some contact lens care solutions and contact lens material incompatibilities that are not yet completely understood. Some of these incompatibilities may cause accumulation of white blood cells in the otherwise healthy cornea. Treatment is usually effective with topical steroid drops and changing lens care solutions. The data for this paper came from direct clinical observations in the practice, as well as clinical experience from the research arm of the practice: [Sacco Eye Group Ophthalmic Research](#)
